

The universe of Intrepid applications is large. We have introduced 2 applications, resume and travel, to introduce the process, and to demonstrate how data ownership using structured format enables rapid reuse. Here are some more uses. If you can think of other uses, we would be delighted to hear from you.

[Login](#) – Admittedly not the most compelling of Intrepid applications. There are many browser or non-browser-based solutions, including recently announced Fido based password-less login by Apple. Nevertheless, the use of a login Intrepid is quick and enables multifactor authentication including biometrics in the same easy process.

[Personal Contact](#) – Your personal name, address, phone, email data.

[Business Card](#) – Your Intrepid Business card. You may need these when you are filling out a loan application, for instance, and are required to provide the information in ten different forms.

[Credit Card](#) – Yes, many browsers scrape this information and there are e-wallets that attempt to store all your cards but creating Credit Card Intrepids for your multiple payment methods enable clear, unambiguous, and rapid use of credit cards without handing this data to an intermediary. Credit Card Intrepids also enable rapid update of autopay data should an existing card be compromised and replaced.

[Bank Account](#) – If you wish to avoid the 3-4% surcharge of credit card and such, you may use your Bank Account Intrepid for payment or other purposes. We haven't created other payment mechanisms yet, but the same process can apply to any online payment system, including crypto.

[Covid Passport](#) – A Covid Passport Intrepid would have been easy to manage and use. Only access to a central verification database would have been required.

[Driver's License](#) – When you are required to provide your driver's license number to applications. Using a Bluetooth or NFC receiver can enable the delivery of the license anywhere. We know there are large State govt. efforts to create smartphone-based DL systems.

[Home/House](#) – The House Intrepid encapsulates all the features of a house so you can apply for a mortgage, sell, insure, make a claim against. Ideally this Intrepid is created when the architectural plans of a house are created, and then transmitted to every subsequent owner. When remodeled, the house Intrepid can be easily update. No need to depend on 3rd party home descriptions that are generally riddled with inaccuracies.

[Vehicle Info](#) – The Vehicle Intrepid captures your vehicle data to assist you in selling, insuring, and providing vehicle data to registration, repair, and other applications.

Over time we will create many more vocabularies to describe the facets of our lives and the data associated with them. When Intrepids are accepted by applications, the transaction time, and the effort to complete your daily tasks will be vastly minimized.

We are interested in your [feedback](#).
